Applicant(s)

Moore, P. et al

Examiner

DeCloux, Amy

Group Art Unit

1644

☒ Responsive to communication(s) filed on mailed on 4-26-00

☐ This action is FINAL.

☐ Since this application is in condition for allowance except for formal matters, **prosecution as to the merits is closed** in accordance with the practice under *Ex parte Quayle* 35 C.D. 11; 453 O.G. 213.

A shortened statutory period for response to this action is set to expire 3 month(s), or thirty days, whichever is longer, from the mailing date of this communication. Failure to respond within the period for response will cause the application to become abandoned. (35 U.S.C. § 133). Extensions of time may be obtained under the provisions of 37 CFR 1.136(a).

Disposition of Claim

☒ Claim(s) 21-103 is/are pending in the application

Of the above, claim(s) _____ is/are withdrawn from consideration

☐ Claim(s) _____ is/are allowed.

→ ☒ Claim(s) 21-103 is/are rejected.

☐ Claim(s) _____ is/are objected to.

☐ Claims _____ are subject to restriction or election requirement.

Application Papers

☐ See the attached Notice of Draftsperson's Patent Drawing Review, PTO-948.

☐ The drawing(s) filed on _____ is/are objected to by the Examiner.

☐ The proposed drawing correction, filed on _____ is ☐ approved ☐ disapproved.

☐ The specification is objected to by the Examiner.

☐ The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).

☐ All ☐ Some* ☒ None of the CERTIFIED copies of the priority documents have been

☐ received.

☐ received in Application No. (Series Code/Serial Number) _____

☐ received in this national stage application from the International Bureau (PCT Rule 17.2(a)).

*Certified copies not received: _____

☒ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

☐ Notice of References Cited, PTO-892

☒ Information Disclosure Statement(s), PTO-1449, Paper No(s). 8 and 13

☐ Interview Summary, PTO-413

☐ Notice of Draftsperson's Patent Drawing Review, PTO-948

☐ Notice of Informal Patent Application, PTO-152

--- SEE OFFICE ACTION ON THE FOLLOWING PAGES ---

Detailed Action

1. Applicant's amendment, mailed 4-26-00 (Paper No. 14), is acknowledged. Claims 1-20 have been canceled. Claims 21-103 have been added and are currently pending. In view of the Revised Interim Utility Guidelines and the Revised Interim Guidelines for the Examination of Patent Applications Under the 35 U.S.C. 112, ¶ 1 "Written Description" Requirement, Federal Register, Vol. 64, No. 244, pages 71427-71440, Tuesday December 21, 1999 (available on the PTO Website), a **non-final** office action follows.

2. In view of applicant's amendment mailed 4-26-00 (Paper No. 14), in which all claims addressed in the first office action mailed 10/27/99 were canceled, all rejections are withdrawn.

3. The amendment filed 4-26-00 is objected to under 35 U.S.C. 132 because it introduces new matter into the disclosure. 35 U.S.C. 132 states that no amendment shall introduce new matter into the disclosure of the invention. The added material which is not supported by the original disclosure is as follows: the four paragraphs on the first and second pages of the amendment which was directed to be inserted at page 14, between lines 14 and 15 of the instant specification. There appears to be nothing incorporated by reference in the specification to support the added material.

Applicant is required to cancel the new matter in the reply to this Office action.

4. 35 U.S.C. § 101 reads as follows:

"Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter or any new and useful improvement thereof, may obtain a patent therefore, subject to the conditions and requirements of this title".

5. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

6. Claims 21-103 are rejected under 35 U.S.C. 101 because the claimed invention lacks a credible, substantial, specific, or well-established utility.

Claims 21-103 are drawn to polynucleotides encoding proteins that have

homology to the FK506 binding protein FKBP65 and methods of expressing these proteins, the proteins of SEQ ID NO: 6 and 8, nucleotides and proteins having 95% homology to SEQ ID NO:s 5-8, heterologous nucleic acid and polypeptides, complement, secreted vector, host cell, method of producing the polypeptides and pharmaceutical compositions thereof. The claimed polynucleotides and polypeptides are not supported by either a specific and substantial asserted utility or a well-established utility. The specification fails to provide objective evidence of any activity for the encoded proteins or to show that these proteins even exist. Applicant only states that the sequence has homology to the FK506 binding protein FKBP65. Therefore, SEQ ID Nos:5-8 have no well-established utility. A well-established utility is a specific, substantial, and credible utility that is well known, immediately apparent, or implied by the specification's disclosure of the properties of a material. Identifying a polynucleotide as encoding a FKBP65-like protein does not endow the polynucleotide with such a utility. The instant specification discloses that FKBP65 is a FK506 binding protein and confers immunomodulating activity to FK506, rapamycin and cyclosporin A, (Page 6, lines 20-26 of the instant specification). Identifying a protein as having homology to FKBP65, does not indicate what function it and thus the encoding polynucleotide might have. There is no specific disease or specific function that is suggested by this homology; no conserved regions that would indicate that the claimed polypeptides function similarly to FKBP65 are identified. There is therefore no specific, substantial, or credible utility that is well-known, apparent, or implied by the relationship of the instant polynucleotide to the polynucleotide encoding a FKBP65-like protein or fragments thereof, nor the FKBP65-like protein or fragments thereof, nor the claimed heterologous versions of said proteins and nucleic acids, nor the claimed complement of said nucleic acids, nor the claimed pharmaceutical compositions thereof, nor the claimed homologs of said proteins and nucleic acids, nor the claimed methods of producing the claimed polypeptides.

The claimed polynucleotides also lack a specific or substantial utility. . The utilities identified by the applicant on beginning on page 22 are also not specific or substantial. A utility such as chromosome localization would apply to virtually every naturally occurring polynucleotide and is therefore not specific. Likewise, tissue-specific expression does not rely on specific properties or functions of the encoded protein, nor do uses including gene therapy, forensic uses and uses in molecular techniques such as Northern and Southern blots and antibody production. Further, the specification does not disclose any diseases or conditions known to be associated with the encoded protein, clearly further research would be required to identify a disease in which the encoded protein is involved and would be of significance; Therefore, the polynucleotide and the encoded polypeptide and derivatives thereof therefore lack a substantial utility. See *Brenner v. Manson*, 383 U.S. 519, 535-36, 148 USPQ 689, 696 (1966), noting that "a patent is not a hunting license. It is not a reward

for the search, but compensation for its successful conclusion." A patent is therefore not a license to experiment. See also the Revised Interim Utility Guidelines available at www.uspto.gov.

7. Claims 38-51 and 68-80 are also rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention.

Applicant has described the polynucleotide sequences consisting of SEQ ID NOs:5 and 7, as well as nucleotides encoding the amino acid sequence of SEQ ID NOs:6 and 8. However, the claims as written encompass polynucleotides that encode proteins with 95% homology to SEQ ID NOs: 6 and 8, that vary substantially in length and also in nucleotide composition. The instant disclosure of two nucleic acids, that of SEQ ID Nos:5 and 7, does not adequately describe the scope of the claimed genus, which encompasses a substantial variety of subgenera. A description of a genus of cDNAs may be achieved by means of a recitation of a representative number of cDNAs, defined by nucleotide sequence, falling within the scope of the genus, or of a recitation of structural features common to the genus, which features constitute a substantial portion of the genus. *Regents of the University of California v. Eli Lilly & Co.*, 119F3d 1559, 1569, 43 USPQ2d 1398, 1406 (Fed. Cir. 1997).

The specification discloses the isolated cDNA sequence SEQ ID NOs:5 and 7 and the translated amino acid sequence of SEQ ID NOs: 6 and 8. The specification does not provide evidence that the proteins of SEQ ID Nos:6 and 8 actually exist. There is no description of the required structural and functional features of said proteins, or of the conserved regions that would be critical for these features. Further, the prior art does not provide compensatory structural or correlative teachings to enable one of skill to identify the polynucleotides encompassed.

Therefore, applicant has not disclosed sufficient species such that one skilled in the art would conclude that applicant was in possession of the claimed genus of polynucleotides encoding polypeptides 95% identical to SEQ ID NOs: 6 or 8.

Therefore, the structure of these elements is not conventional in the art and one of skill in the art would not recognize from the disclosure that applicant was in possession of the genus of nucleic acids, including genes, encompassed by the claimed invention.

8. Claims 52-103 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. Claim 52-103 are not

supported by the specification or by the claims as originally filed. There is no support in the specification or claims as originally filed for the recitation "accession number 209293". There is no written description of the claimed invention in the specification or claims as originally filed. Thus the claimed invention constitutes **new matter**.

9. Claims 38-51 and 68-80 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

Claims 38-51 and 68-80 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabled for nucleic acid molecule encoding SEQ ID NO:6, and SEQ ID NO:8, does not reasonably provide enablement for a nucleic acid molecule comprising a nucleotide sequence encoding an amino acid sequence at least 95% identical with residues of SEQ ID NO:6 and SEQ ID NO:8, nor with nucleic acid molecules comprising heterologous sequences, recombinant vector, recombinant host cell, a method of producing said polypeptide, or a composition of said nucleic acid molecule.

Additionally, the specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make or use the invention commensurate in scope with these claims. Factors to be considered in determining whether undue experimentation is required are summarized in *In re Wands* (858 F.2d 731, 737, 8 USPQ2d 1400, 1404 (Fed. Cir. 1988)). The factors most relevant to this rejection are the scope of the claim, unpredictability in the art, the amount of experimentation required, and the amount of direction or guidance presented.

The specification disclosure is insufficient to enable one skilled in the art to practice the invention as broadly claimed without an undue amount of experimentation. Besides the polynucleotides encoding polypeptides with the sequences SEQ ID NO:6, and SEQ ID NO:8, respectively, the specification fails to provide guidance as to how to make or use the claimed polynucleotide encoding a polynucleotide with at least an 95% identity to the claimed sequences. Since the nucleic acid sequence of a polynucleotide determines its protein coding properties, predictability of which changes can be tolerated in a polynucleotide's nucleic acid sequence and still retain similar functions and properties requires a knowledge of, and guidance with regard to which nucleic acids in the nucleotide sequence, if any are tolerant of modification and which are conserved (ie., expectedly intolerant to modification), and detailed knowledge of the ways in which the product's structure relates to its functional usefulness. However, the problem of predicting functional aspects of the product from mere sequence data of a

single nucleic acid sequence and what changes can be tolerated is complex and well outside the realm of routine experimentation. *In re Fisher*, 1666 USPQ 19 24 (CCPA 1970) indicates that the more unpredictable an area is, the more specific enablement is necessary in order to satisfy the statute. Without such guidance, the fragments which can be made and used to encode peptides of the claimed activity is unpredictable and the experimentation left to those skilled in the art is unnecessarily, and improperly extensive and undue. See *Amgen, Inc. v. Chugai Pharmaceutical Co. Ltd.*, 927 F.2d 1200, 18 USPQ2d 1016 (Fed. Cir. 1991) at 18 USPQ2d 1026-1027 and *Ex parte Forman*, 230 USPQ 546 (BPAI 1986).

Therefore, the scope of the claims is not commensurate with the enablement provided by the disclosure with regard to the extremely large number of nucleic acid encoding the amino acid sequences broadly encompassed by the claims due to the significant number of untaught sequences. Therefore, there is no evidence of record to show that one skilled in the art would be able to practice the invention as claimed without an undue amount of experimentation.

In view of the quantity of experimentation necessary, the limited working examples, the unpredictability of the art, the lack of sufficient guidance in the specification and the breadth of the claims, it would take undue trials and errors to practice the claimed invention.

10. Claims 1-5, 7-10 and 15 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

A) Claim 57 recites the limitation "e" in reference to a section of claim 52. There is insufficient antecedent basis for this limitation in the claim since there is no section "e" in claim 52.

11. No claim is allowed.

12. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Amy DeCloux whose telephone number is (703) 306-5821. The examiner can normally be reached Monday through Friday from 9:00 am to 6:00 pm. a message may be left on the examiner's voice mail service. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Christina Chan can be reached on (703) 308-3973. Any inquiry of a general nature or relating to the status of this application should be directed to the Technology Center 1600 receptionist whose telephone number is (703) 308-0196.
